DETAILED ACTION

Information Disclosure Statement

1. A total of four references in the information disclosure statements filed 20 May 2004, 25 June 2004, and 10 August 2004 have been lined through because they are neither in English nor is there a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kamei et al. (U.S. Patent 6,274,516).

Kamei et al. teach a display apparatus comprising an inorganic SOG (Spin On Glass) film that has been surface treated by irradiated with ultraviolet light or plasma then coated with a second SOG film to reduce unevenness and flatten the film (column 3, lines 9-19). The second SOG film reads on a functional film since it has the function of reducing unevenness and flattening the film. Irradiating the inorganic SOG film with UV or plasma improves the

wettability of the film with respect to the second SOG film (column 6, lines 25-30), i.e. the inorganic film has a lyophilic property relative to the second SOG film forming composition. The inorganic SOG film is formed on a substrate with multiple layers (Figure 1A-1C and column 7, lines 23-28), which reads on a base component formed on a base plate (e.g. interlayer insulating film 6 may be the base component and semiconductor substrate 1 may be the base plate).
